

KSK0172

When multiple collectors are connected in series, an interconnection kit is required to make this connection. The HP-450 collector is designed so that one end of the collector fits into the other, making it easy to construct banks of collectors. The collectors are sealed by a pair of o-rings on one end of the collector. These o-rings must align properly in order to make a seal, but still allow for expansion and contraction of the manifolds.

Contents:

- 1 – Manifold Connection Plate
- 2 – Tube Retainer Connection Plates
- 1 – Allen Wrench

Assembly - Manifold
